Profile

A former Tennis professor and player turned Frontend Engineer with three years of industry expertise, I've seamlessly transitioned my passion for precision and performance from the tennis court to crafting exceptional digital experiences at a high-end agency from Argentina, combining my unique background with technical prowess to elevate web development to new heights.

Employment History

Front-End Engineer, Indicius, Buenos Aires

JANUARY 2020 – PRESENT

- As a Front-End Developer at Indicius since 2020, I've been the creative force behind translating design concepts into vibrant and functional digital experiences.
- I played a key role in ensuring our products are not only visually appealing but also user-friendly, accessible, scalable, and high-performing.
- Collaborated closely with the Design team to validate and implement their creative ideas seamlessly into the development process.
- Precision matters, and I excelled in accurately estimating project delivery dates, ensuring timely communication with both the project management team and clients.
- Effective communication is at the core of my role—I've been proactive in updating all stakeholders on project-related situations, whether positive or negative, using tools like GitLab, Trello and Jira for asynchronous collaboration.
- Adhered rigorously to development guidelines, contributing to the establishment of high standards for all company projects.
- Meticulously documented every aspect of the development process, ensuring a clear and comprehensive understanding of the tools involved for efficient project management.

Tech Stack: React, TypeScript, GraphQL, Gatsby, Figma, Contentful

QA Engineer, Pixel2HTML, Buenos Aires

DECEMBER 2018 – DECEMBER 2019

- Spearheaded comprehensive manual and automated testing initiatives as a QA Engineer at Pixel2HTML, ensuring the timely delivery of flawless front-end development projects.
- Thrived in a fully remote work environment, collaborating seamlessly with teams across different time zones to maintain efficient communication and workflow.
- Validated design concepts rigorously, guaranteeing the feasibility of proposed ideas for swift and seamless development, contributing to on-time project completion.
- Developed and executed detailed test plans, utilizing both manual and automated testing methodologies to identify and rectify any bugs or inconsistencies in the front-end code, enhancing overall project quality and user experience.

Tech Stack: Jest, React Testing Library, Gitlab
